I understand that by giving consent, I am not responsible for any Galen Myotherapy treatment given and the provision of professional indemnity insurance for this is the responsibility of Sarah Hancox.

Signed: Veterinary Surgeon M.R.C.V.S. **Date:**

Please return the signed consent to contact@moorlandcanine.com

Galen Myotherapy is a hands-on manual therapy, specialising in the identification and treatment of muscular injury and associated compensatory issues in dogs. Through the application of targeted clinical massage techniques, and other soft-tissue techniques myotherapy can assist in the management and support of a range of mobility issues, promoting optimal muscle function throughout a dog's life and enhancing their performance, wellbeing, and recovery.

Pain resulting from muscular issues can cause stress that impacts negatively on how the dog functions both physically and physiologically, often resulting in complex symptoms. Galen Myotherapy promotes optimal muscle function through the easing of congestions and shortenings within the muscle fibres caused through injury, compensatory or repetitive strain issues.

Galen Myotherapy targets chronic issues resulting from long-term muscular compensation in response to pathology, past trauma or repetitive strain. By treating secondary or compensatory issues, treatment can be part of a highly effective management programme, supporting conditions such as DJD / osteoarthritis, pre- and post-surgical conditioning, muscular pain and palliative care, general lameness and enhancing performance in working and sporting dogs.

Should you be interested in finding out more, further information on Galen Myotherapy can be found on the Moorland Canine website which provides more detailed information on the conditions that myotherapy can support.

I would like to thank you for your time and hope that you will be in a position to consider the benefits of a multimodal approach which could support your patients with appropriate conditions on a case-by-case basis.
